

PDS MANAGER™

PDS MANAGER™ is a high-speed batch editor used to access data on partitioned datasets

PDS MANAGER™ helps users find and manipulate data on partitioned datasets.

Users can search, examine, change, copy, print, or dump the contents of any partitioned dataset.

Security is provided by the installation of an optional password.

PDS MANAGER™ automatically updates significant ISPF statistics for all new or replaced members, providing an audit trail for all changes and adds.

The statistics maintained include

- Version number
- Modification level number
- Date and time created/modified
- User name
- Member size
- Number of records modified

PDS MANAGER™ has simple control syntax for use by both technical and nontechnical personnel.

- PDS MANAGER can process any PDS with records of any length, such as JCL, procedure libraries, parameter libraries, and source code.
- PDS MANAGER can be used to print all or part of a partitioned dataset.
- PDS members can be selected either specifically or generically, by member name or by content.
- Users can search any or all positions of a record for any type of data, examine the record, and then change any or all positions of a record based on the results of the examination.
