

# BIM-ALERT/CICS™

## BIM-ALERT/CICS™ provides comprehensive security for CICS transactions, programs, files, and maps

**BIM-ALERT/CICS™ facilities are easy to use, even for non-technical personnel—no need to write programs, change JCL, or learn a “rules” language.**

Without changing any of your current programs, you can secure transactions, programs, files, and BMS maps.

BIM-ALERT/CICS requires a minimum of memory and DASD, and was written with attention to minimizing the number of security-checking cycles. Your system does not bog down with BIM-ALERT/CICS, so your users won't be slowed down, either.

### **BIM-ALERT/CICS™ User Resource Security allows you to**

- Limit access to secured CICS resources based on the user's profile
- Automatically sign off users and erase screens that are inactive for a specified period
- Define both scheduled and temporary access times—BIM-ALERT/CICS denies any attempt to access the system outside the user's defined access times
- Report access violations to a specific terminal or CICS printer

**BIM-ALERT/CICS™ provides online, menu-driven screens for defining security at all levels—for each user, department, and section.**

BIM-ALERT/CICS offers two ways for you to restrict access to system resources:

- Restrict access times for files, programs, maps, and transactions
- Specify either inquiry-only or inquiry-and-update processing for files

### **Use BIM-ALERT/CICS™ Terminal Resource Security to protect any 3270-type terminal recognized by CICS.**

- Limit access to resources based on the terminal's ID without requiring user sign-on
- Automatically sign off terminals and erase screens that are inactive for a specified period
- Define both scheduled and temporary access times—BIM-ALERT/CICS denies any attempt to access the system outside the terminal's defined access times
- Report access violations to a specific terminal or CICS printer
